

# Automated Penetration Testing for Developers & Product Teams

## Continuous Testing at Scale

As organizations accelerate digital transformation, their attack surface expands rapidly. Unfortunately, traditional penetration testing methods, often infrequent, expensive, and manual, haven't kept pace with the evolving threat landscape. Unlike traditional methods, **Infiltrate.ai** scales effortlessly across your environment. Perform real-time, on-demand testing without waiting weeks for a consultant led engagement.

## Powered by AI

**Infiltrate.ai** is a next-generation Penetration Testing as a Service (PTaaS) platform designed to keep pace with modern development and threat landscapes. Our AI-powered system continuously assesses, validates, and helps remediate vulnerabilities, with no specialist skills required. Integrate with CI/CD pipelines and leverage automated remediation to completely transform the way you approach security testing and assurance.

Get smarter, faster, scalable penetration testing that you can easily manage.

### Take Control

Many organisations lack dedicated security engineers with pen testing skills, leading to gaps in vulnerability detection and the need for 3rd party testers.

### Not Just VA Scanning

Legacy scanners focus on basic Vulnerability Assessments, not true penetration testing, leaving exploitable flaws untested and generating complex, lengthy reports.

### Continuous Assurance

Replace static, annual testing with continuous, automated assessments for real-time assurance and proactive risk reduction across your evolving digital environment.

## Advanced Capabilities. One Unified Experience

Simple, Scalable

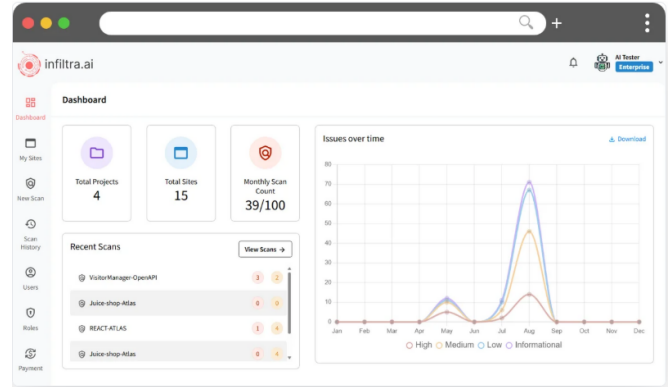

MFA Automation

Multi-step Reasoning

Unified Dashboard

## Automated AI Based Penetration Testing Platform

### Automated Penetration Testing for All Teams

Built for ease of use, the platform requires no prior security testing knowledge. Ideal for DevSecOps, developers, and product managers.

### Covers Key Industry Standards

Tests are aligned with OWASP Top 10, CWE Top 25, and Google's Web Security Testing Guide for full-spectrum coverage.

### Custom AI Payload Engine

Our proprietary engine automates injecting and interpreting attack payloads using AI, simulating sophisticated attacker behavior.

### Quality Reporting

Get automated reports with the clarity of manual pentest docs, prioritized by severity with remediation guidance.

### Seamless Enterprise Integrations

Secure APIs integrate natively with DevSecOps pipelines, ITSM platforms, IAM systems, and CI/CD tools.

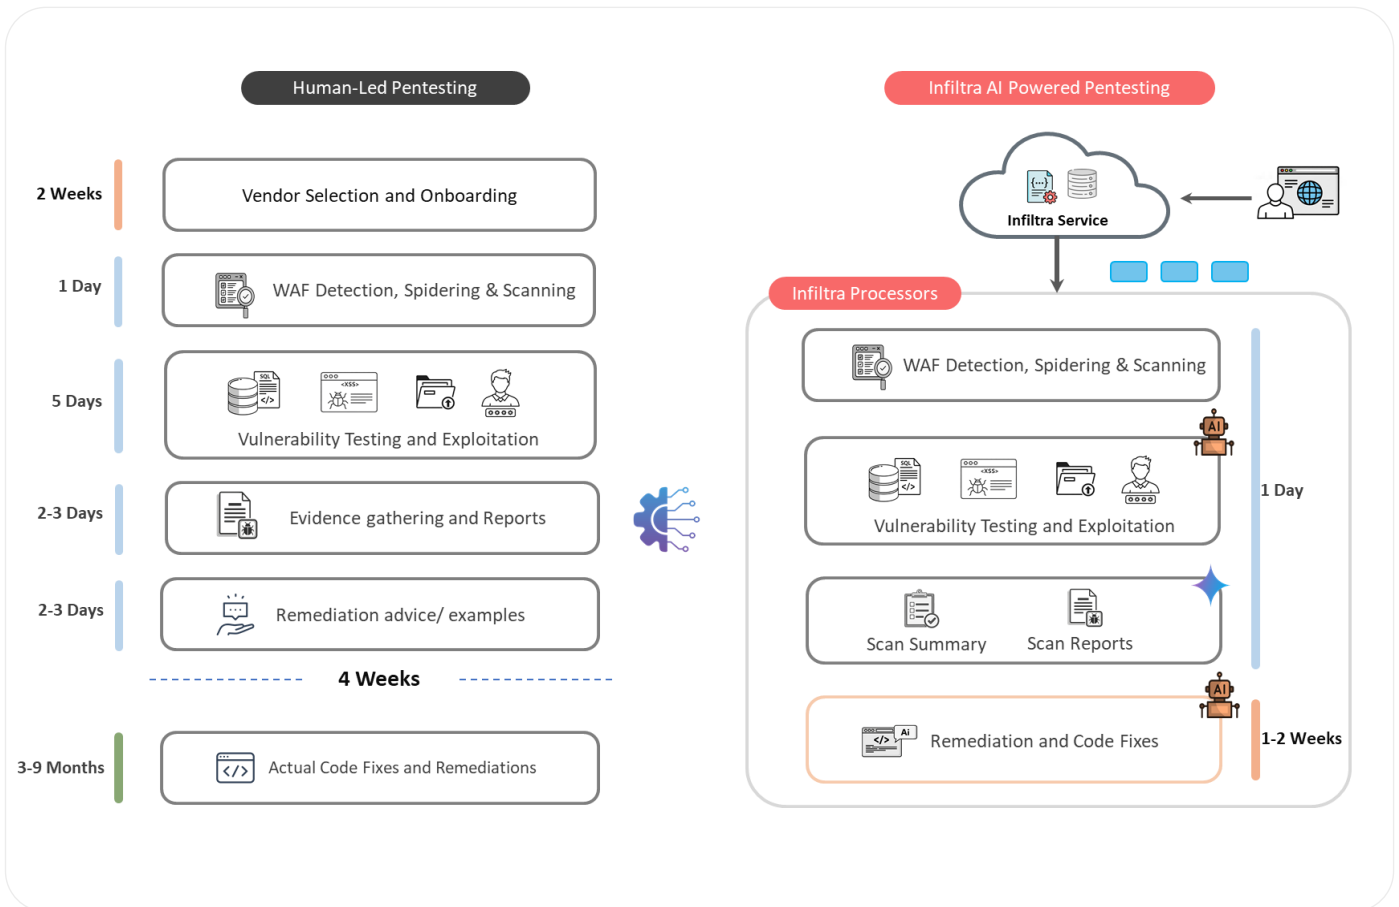

### Scalable & Deep Test Coverage

AI-powered automation enables frequent, affordable, and comprehensive testing across applications and environments.

# Better coverage in a fraction of time

Get actionable insights within hours, not weeks.

Your applications and development cycles are constantly evolving.

**With Infiltra, your security does too.**
